

The WiCoil Way

Wisconsin Coil Spring makes precision mechanical springs to your specifications, delivered on time, anywhere. But did you ever wonder how the process works?

1

We start by studying your drawing, analyzing the cycle life of the spring, the functional tolerances on loads, rates, and both outside and inside diameters

2

Then we meet with you to review the spring design, and recommend the proper material and finish. All at the least possible cost

Design Capabilities

3

Our engineers and senior springmakers collaborate on creating the perfect spring – within 3 days!

Prototypes in 3 Days

4

We put your spring through a battery of tests to be sure it's just right before seeking your final approval

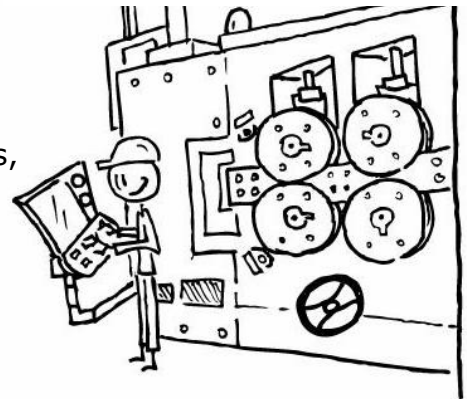

ISO 9001: 2008

5

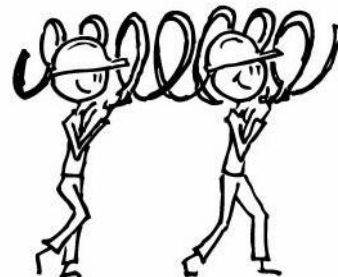

We order the wire (if we don't have it in stock) and, as soon as it arrives, start producing your springs on sophisticated computer numerical control (CNC) machines

High Technology

6

Your spring is baked, checked for accuracy, and packaged to your specifications, then shipped to your door in three weeks or less

Delivery in 3 Weeks
